

United Paranormal Project Training Curriculum

UNIT III: SCIENTIFIC EQUIPMENT

After the completion of this unit, the member will be able to:

1. Understand the nomenclature of the equipment.
2. Be able to operate any equipment UPP uses.

1. PURPOSE OF FIELD TRAINING INVESTIGATORS

- Each new UPP member shall learn and be able to operate scientific equipment that is used in paranormal investigations.

2. TYPES OF EQUIPMENT USED IN PARANORMAL INVESTIGATIONS

- **The Investigator** – Is the most important tool in the field. By working on instincts and operating the scientific equipment proficiently.
- **Digital Voice Recorders** – Used to capture audio and to record Electronic Voice Phenomena.
- **EMF Meter** – Used to monitor the Electro Magnetic Field in an area, which is believed to be emitted by spirits.
- **Cameras** – Used for obvious reasons of capturing a photograph of a spirit or a phenomena. Digital Cameras are what we recommend. We also use Full Spectrum Cameras and Scout Cameras.
- **Camcorders with Night Vision** - These units are used mostly by Investigators while investigating. These provide video and audio and are very important in an investigation. It is recommended that they be used with additional IR (Infra-Red) Illuminators to aid in the lighting.
- **Digital Thermometers** – Used to capture the ambient temperature in an area. Used to find temperature fluctuations believed to be caused by paranormal activity.
- **Motion Devices** – We have motion sensors that will light up when there is motion within a certain area of the unit. The Geophone is another tool that is used to detect footsteps or any vibrations that may occur.

- **The Ovilus or PX** – Is a unique device that has 6 different modes to choose from. UPP primarily uses this unit in mode #3 (Mixed Mode), which the unit will speak using phonemes or the dictionary when energy levels are above or below the phoneme range the dictionary is used.
As the energy levels change the leds on the right side will change starting from the bottom and Lighting up in sequence they will indicate what the energy levels are.
- * **Thermal Imaging Camera** – Used to pick up the thermal heat in an area.
- * **SB-7, Shack Hack, Spirit Box, Ghost Box** – Used to catch Spirits Voice.

3 **BRIEF SYNOPSIS OF EQUIPMENT**

The most important piece of equipment in the paranormal field is the Investigator. The Investigator must solely work on his or her instincts. Always be aware of the surroundings and trust your instincts. If you have high EMF readings on the meter, pay attention to what your body feels and then document it. It is very important that you get to know each piece of equipment completely and how to operate it.
